Assisted Natural Regeneration

**Praxisbeispiel für Biodiversität,
soziale Wirkung und Carbon Removal**

Sven Kapell

**Workshop des Fair Finance Institute
Berlin, 21. Oktober 2025**

NatureRe

Our mission is to invest in nature, restore biodiversity and remove carbon at scale.

We are a 25+ **global team** with impact finance, carbon, and nature restoration expertise, and **10+ years of track record**.

We focus on ecosystem restoration, offering **high quality, high yield and highly scalable** nature-based carbon removal credits.

We invest in Colombia and will extend our projects in Brazil in 2026.

Our Functioning Nature Finance Model

Allocating carbon monetisation through land ownership, legal conservation status and biodiversity validation

1. **Dual model** for investors (high returns) and offtakers (high-integrity biodiversity and carbon contributions)

2. Science backed & cost effective:
Assisted Natural Regeneration
restores entire ecosystems

3. **Permanence** and full control through **land ownership** and conservation with the creation of **natural reserves**

4. **Transparent, high-integrity credits** (Verra 0047, CCB, Equitable Earth)

5. Triple **carbon, biodiversity** & **social** impact, with tech-verified measures

6. **Reinvestment** in Colombia & Brazil for long-term restoration and community benefits

Our Highly Scalable Carbon Removal Process

A replicable model for large-scale impact

Our Unique Methodology

We master Assisted Natural Regeneration to make it the best CDR solution

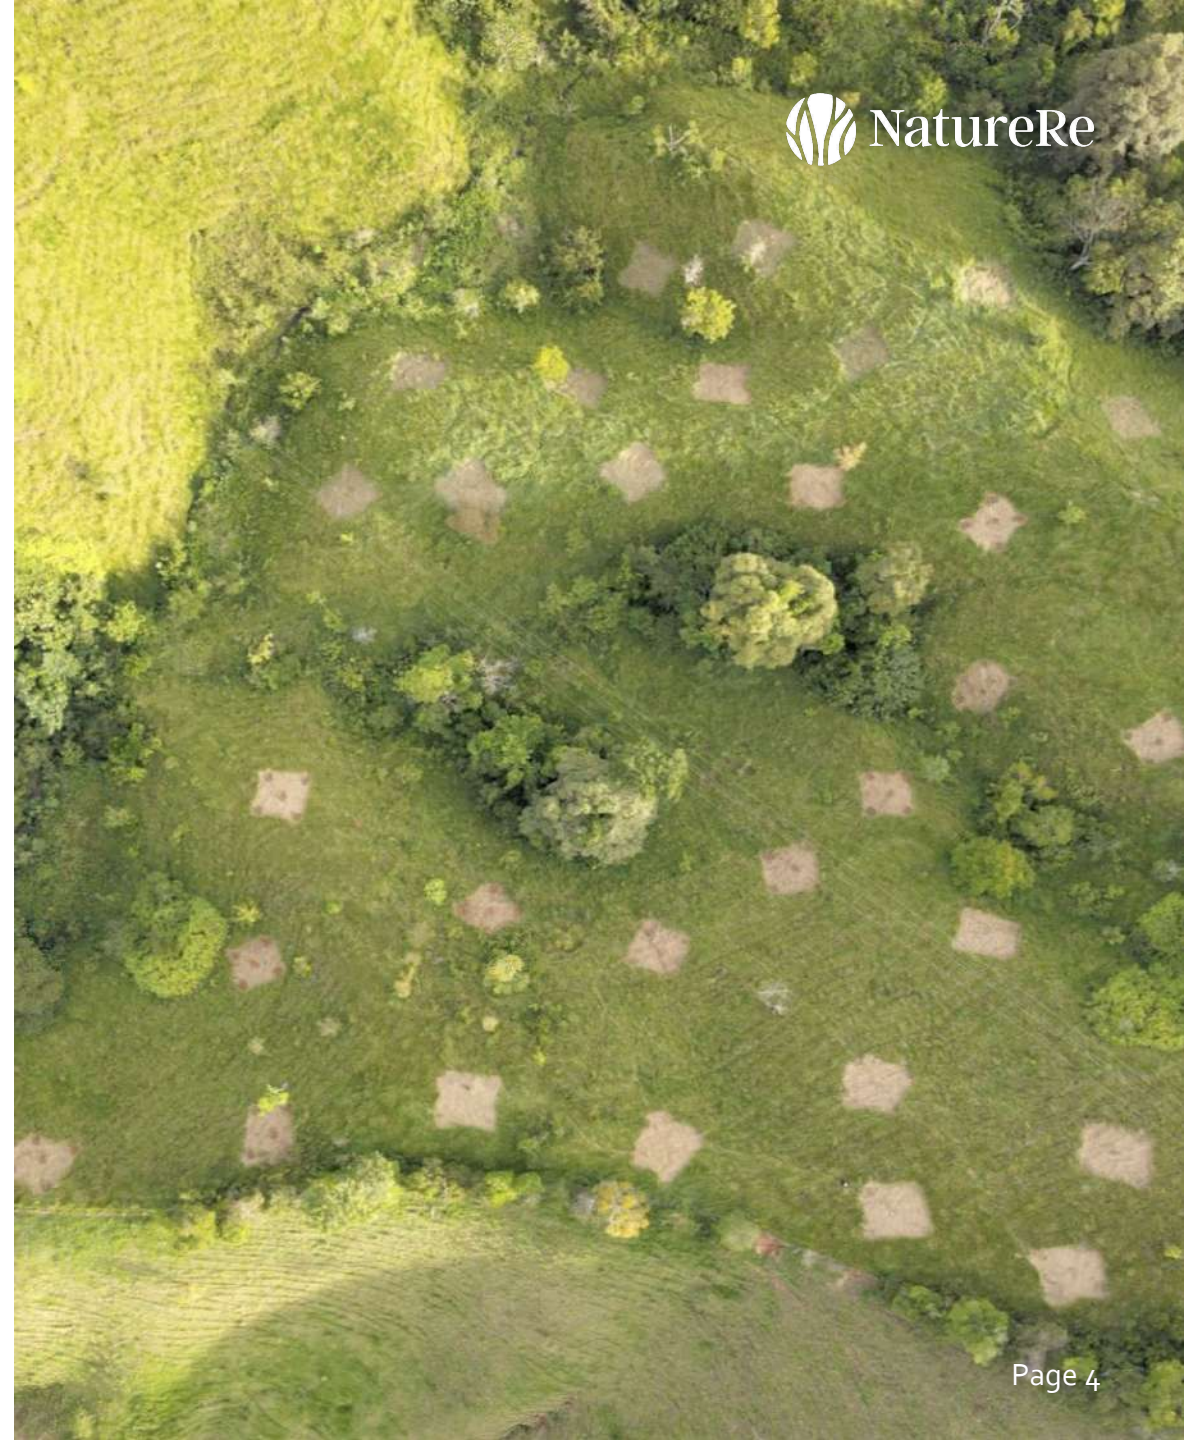

Land selection with minimum 20% of existing forest cover. **ANR design** using strata analysis and technical mapping.

Soft interventions: small scale planting of various native species, grazing animal exclusion, fire prevention, boundary fencing, control of invasive species.

Strategy: nucleation (low to high density) to replicate natural succession processes, corridors to unite patches of forest, and enrichments.

Maintenance: multiple phases with NatureRe rangers (fencing, invasive species suppression, replanting) for adaptive restoration.

Our Advanced Social Strategy

Putting local communities at the HEART of our project

H

Health & Well-Being

Home improvement for employees, increased water quality for community

E

Economic Empowerment

Employment for local workers (rangers, forest engineers) above minimum wage

A

Ambition & Education

Youth environmental education program and employment training, particularly for women

R

Representation & Inclusion

Employment of women with small children and child care services to support working parents

T

Transparency & Exchange

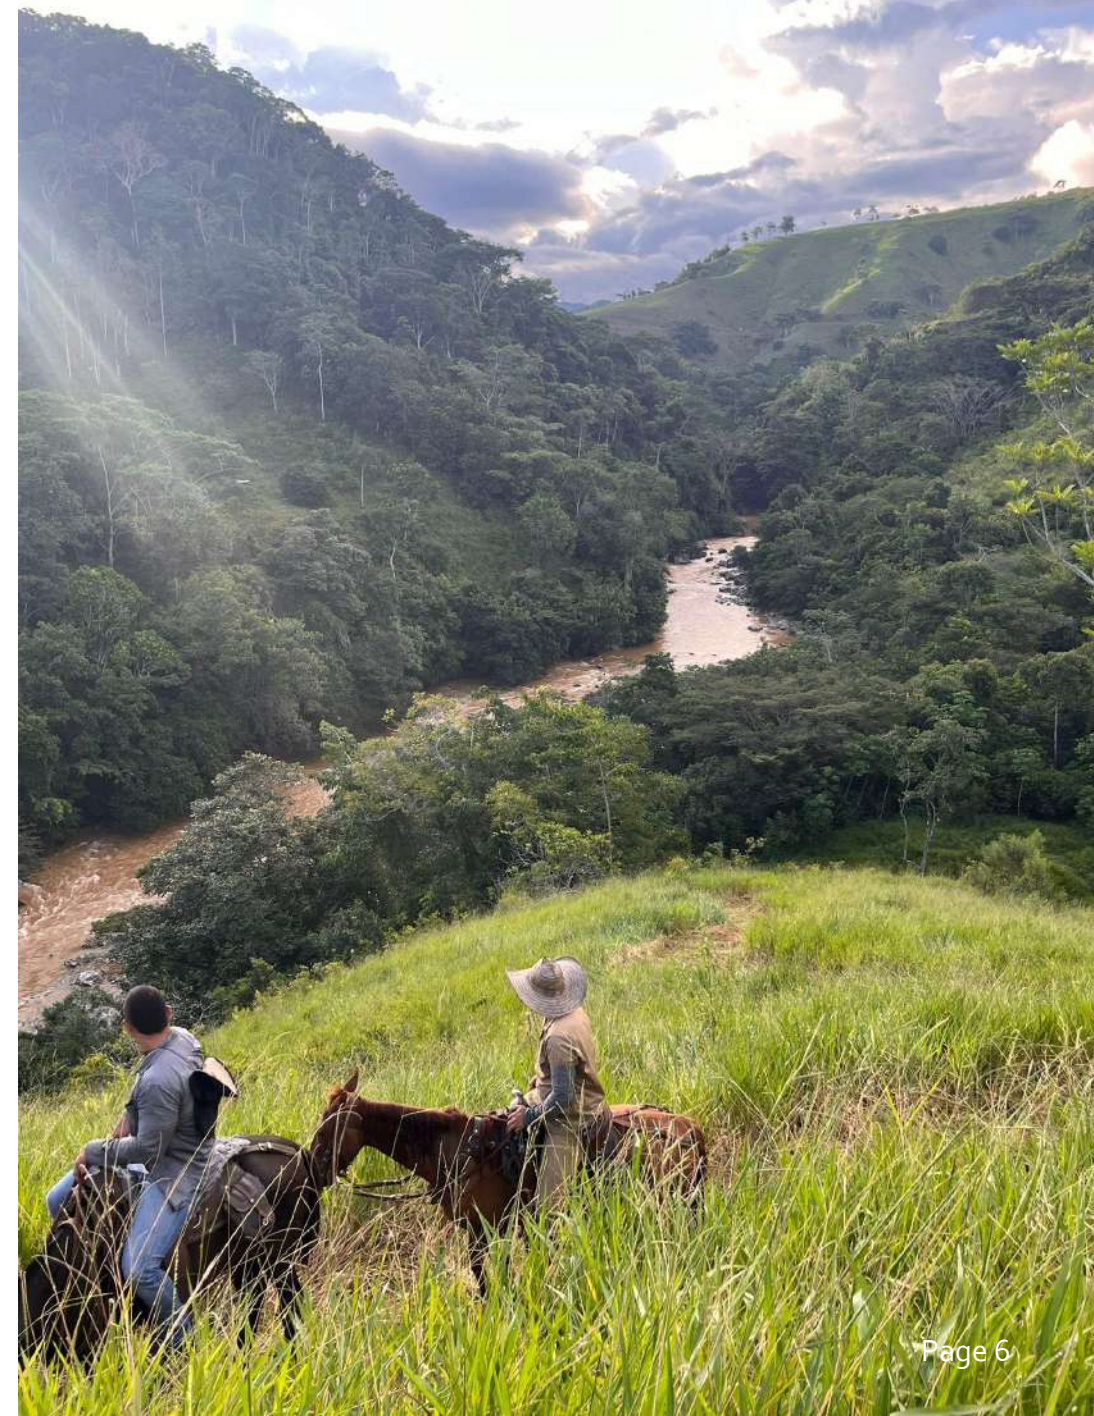

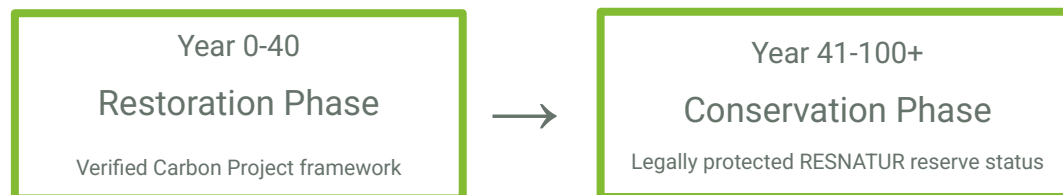

Consultation of local stakeholders for project acceptance by community

Natural Reserve Certification

Permanent Land Protection

- **RESNATUR registration initiated at project start** to secure legal recognition of the land as a Civil Society Natural Reserve
- **Legal designation under Colombian law** places the land in a protected conservation category **beyond the carbon crediting period**
- **>100-year legal conservation status** prevents land use change, speculation or conversion after restoration phase
- **Transition from restoration to permanent conservation** locks biodiversity outcomes into land governance
- **Community engagement into the reserve process** to secure long-term stewardship and acceptance

Our Track Record

An extensive restoration expertise and track record

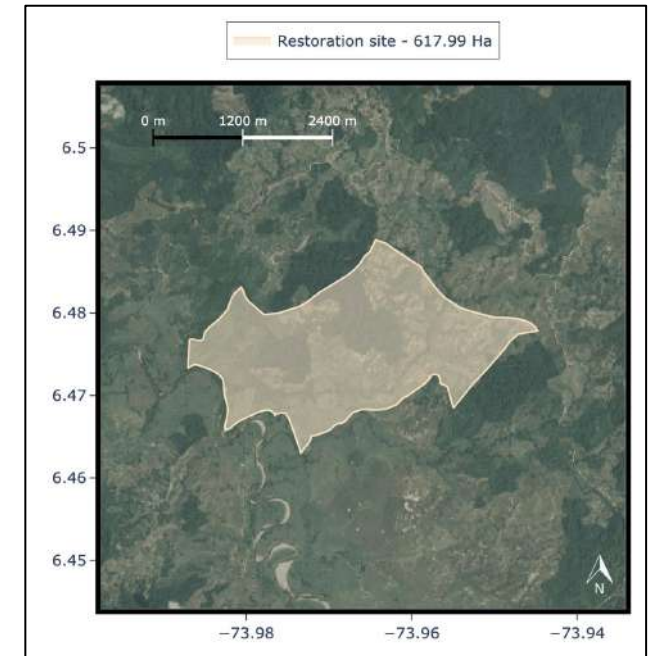

Pilot Project, Chocó 2014

[Project 1](#), Antioquia 2022

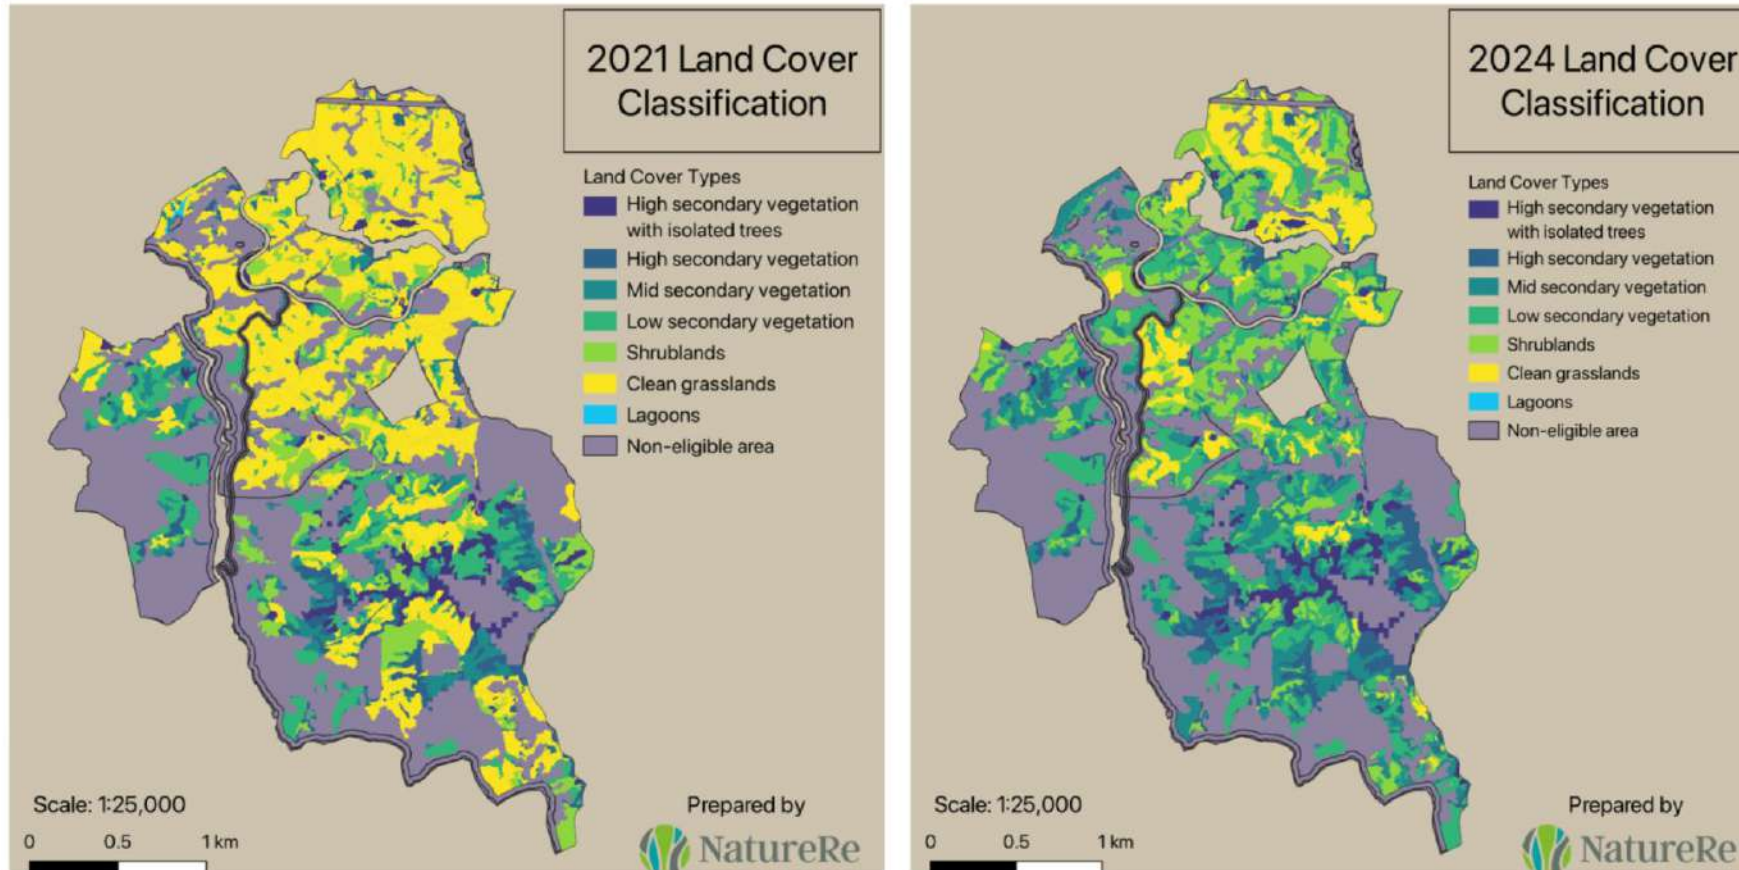

[Project 2](#), Santander 2025

ANR implementation: designing
First instance: 2025
Previous use: cattle ranching
Climate type: humid tropical forest

PDD1: 700ha pilot to 16k scale-up

Demonstrated ANR effectiveness and scaling potential

SCALE UP

Operational readiness: 25+ global team with expertise across impact finance, carbon, and ecosystem restoration

Network of partners: knowledge, social engagement and impact, on-ground restoration and monitoring, technology

Land pipeline: land manager and growing team establishing land prioritization, project design, and total addressable land area

Successful implementation: natural restoration and planting; +65% tree survival rate; 2 full-time rangers employed (+spouses)

Verified Standard: VCS registered (audited and verified), CCBS validated (demonstrated impact), VM0047 transfer-ready, AA SCOR rating

First monitoring completed: carbon curves supports base case, fauna/flora/water/landscape connectivity

Our Mitigation Strategy

Restore Insurance Product

Project Methodology in Antioquia Awarded **'AA' Grade** by SCOR as part of its Ecological Restoration Insurance Solution. Proof of high ecological quality and sound risk management.

Ecological Restoration Due Diligence Grade

NatureRe Capital AG

Prospective Insured Name : NatureRe Capital AG	Grade AA
Project/Review Name : Project Methodology Review	
Verification CERP Name : Juan Gorostidi Colas	
SER Grader Name : George Gann	
Date of Grading : 28 July 2025	

General Feedback / Comments

- This Grading is providing in respect of SCOR's Ecological Restoration Insurance Solution's Restore product, which forms part of its NatReCo Initiative.
- The Grading scale is as follows: 'AAA', 'AA', 'A', 'B', 'C'. The project or methodology must be a minimum 'A' Grade to be approved by SCOR.
- The Ecological Restoration Due Diligence review undertaken relates to the project methodology rather than a specific project. Therefore, only a Provisional Grade will be issued. Once a project is identified and if this project methodology is applied, that project will be reviewed accordingly and a Final Grade for that project will be issued.

In collaboration with  

Ecological Restoration **Insurance Solution** (NatReCo Initiative) developed by SCOR.

Restore product to protect projects from the financial **impacts of unforeseen events** including: fire, heat wave, landslide, lack of precipitation , earthquakes, floods and more.

Project 'quality' assessment made in collaboration with the **Society for Ecological Restoration** (a leading global authority on ecological restoration), includes assessment, planning & design, and monitoring and evaluation.

If it's insurable, it's investible.

A Diverse Experienced Team

With a global presence

Triple expertise: nature restoration, impact finance, and carbon projects

25+ employees (CH/EU, COL, US)

40% women team & board

Senior board with extensive corporate track record
