About CPI: Climate Policy Initiative (CPI) is an analysis and advisory organization with deep expertise in finance and policy. Our mission is to help governments, businesses, and financial institutions drive economic growth while addressing climate change. CPI has six offices around the world in Brazil, India, Indonesia, the United Kingdom, and the United States.

About Conservation International: Since 1987, Conservation International has combined fieldwork with innovations in science, policy and finance to secure the critical benefits that nature provides to humanity. With offices in more than two dozen countries and a worldwide network of thousands of partners, we've helped to protect more than 6 million square kilometers of land and sea across more than 70 countries.

About Amazon Investor Coalition: The Amazon Investor Coalition (AIC) is a global impact finance learning-and-collaboration platform that unites investors, philanthropists, and corporate buyers in partnership with Amazon communities, entrepreneurs, governments, and civil society.

About: This document is published as part of the **Finance Lab for Irrecoverable Carbon (FLIC)** project within Conservation International, and in partnership with CPI. The goal was to source and develop new ideas for financing the Earth's irrecoverable carbon ecosystems – the places we must protect to avoid climate catastrophe. We developed five financial blueprints in total between 2022-2024. The documents are publicly available, and we hope they spur further development and implementation of the ideas. More information can be found at: <https://www.conservation.org/projects/irrecoverable-carbon>

The Wild Harvest Fund is a \$5 to \$10 million investment fund concept, paired with a philanthropic facility, that offers concessional loans to cooperatives and small-to-medium enterprises (SMEs) involved in 'wild harvest' products in the Amazon rainforest. These are fruits, nuts, oils and resins that depend on forest canopy to grow and are usually harvested by hand by Indigenous Peoples and Local Communities (IPLCs). The Wild Harvest Fund is designed to start in the Brazilian Amazon, where 250+ associations and cooperatives source wild harvest products but face barriers to grow at scale. The Wild Harvest Fund helps to address these barriers by coupling financing capital and philanthropic funds to derisk investments along the supply chain.

At scale, the Wild Harvest Fund could help build bioeconomy businesses across IPLCs lands in Brazil, which are important for global climate stability. IPLC lands in the country contain over 12.87 billion metric tons of irrecoverable carbon (9% of the global total).

Context

Irrecoverable Carbon in Brazil

19.456 BILLION

metric tons of **total irrecoverable carbon***

57%

of irrecoverable carbon is within **protected areas**

66%

of irrecoverable carbon is within **Indigenous and community lands**

2.9%

of irrecoverable carbon lost between 2011-2022

*Irrecoverable carbon is the carbon stored in ecosystems that, if deforested or destroyed, could not be re-sequestered for at least 30 years.

Irrecoverable carbon in Brazil.

What are Wild Harvest Products?

A promise to bridge conservation and sustainable economic development

Wild Harvest Products

Non-timber forest products (NTFPs) that are either harvested from or compatible with highly conserved native forests. Wild-harvested products can include fruits, nuts, seeds, resins, leaves, or even animals. Examples include açai, aguaje, andiroba, babaçu, Brazil nuts, breu branco, camu-camu, copaíba, cumaru (tonka beans), cupuaçu, jaborandi, jatobá, murumuru, pirarucu, tambaqui, and ucuuba.**

Community-based

Community engagement is essential to the management of Wild Harvest Products, as it ensures the integration of local knowledge and best practice forest management techniques. By supporting sustainable livelihoods, WHPs play a crucial role in the conservation of tropical forests.

Low-impact

Low-impact management of WHPs prioritizes sustainable harvesting without disrupting forest ecosystems. This approach minimizes disturbance through planned harvesting, respecting species ecology, and manual collection, while preserving biodiversity, soil health, and water quality. In the Brazilian Amazon, research on the impact of WHP development in protected areas ([Rosenfeld, T., 2024](#)) reports positive conservation outcomes.

*The Wild Harvest Fund focus excludes from this definition hunting, agroforestry systems and fibers that require some sort of logging to harvest. The WHF is specifically aimed at improving sustainability practices for forest products that meet the Wild Harvest criteria, however, it is recognized that the permanence of this intervention relies on communities having diversified sources of income (that might include hunting, agroforestry for instance). In these cases, it is acceptable if those activities are part of the supply chain, as long as the overall environmental indicators are met.

Case Study: Copaiba value chain in Calha Norte (Pará)

- Copaiba trees (*copaifera*) can be up to 40 meters high and 4 meters in diameter. They grow slowly and can live up to 400 years (Trindade et al, 2018). These trees contain significant carbon.
- **Product:** Copaiba oil is a traditional Amazonian medicinal product with cultural significance for local communities.
- **Process:** The resin is directly extracted from the tree trunk by Indigenous Peoples, Quilombola or Local Communities without damaging the tree.
- **Barrier:** It is common for communities to lack the resources to purchase the inputs needed to implement good copaiba management practices, as well as paying the extractors upon delivery of the production. This makes it difficult for families to engage and encourages sales to intermediaries who pay upon delivery and take care of the logistics and inputs – even though these intermediaries offer lower prices.

Working capital loans to cooperatives and associations would allow them to purchase the necessary inputs and pay local managers upon delivery, gaining production volume and better conditions for implementing good management practices than would be the case with individual harvesting and selling to intermediaries.

A capital expenditure loan to a local SME could increase production volume, implement traceability strategies, and facilitate access to high value-added markets, increasing revenue for community enterprises (e.g. doTerra or Natura).

Photos by Juan Villalobos. EcoCentro da Sociobioeconomia, Santarem

Interconnected barriers for Wild Harvest Product markets

WHPs face several barriers with complex interdependencies. Expanding the WHP market requires working across various dimensions, some of which include:

Connectivity to markets

- Limited technological infrastructure
- Limited physical infrastructure
- Long distances and delivery time
- Low traceability strategy

Financial access

- Low track record and collateral from local organizations
- Small ticket size
- High interest rates offered to local organizations

Supply of WHPs

- Low IPLC business literacy
- Inconsistent product standards
- High informality / lack of legal documentation

Demand of WHPs

- Reduced corporate interactions with local organizations and IPLC
- Competition with other products/commodities and minimum product differentiation

The Solution: Wild Harvest Fund

The Wild Harvest Fund seeks to address the interconnected barriers to investing in Wild Harvest Products.

Through its philanthropic facility, it aims to enhance local governance by empowering local implementation partners. Simultaneously, the investment fund provides fair and adequate credit access to local associations, cooperatives and SMEs.

- **Status:** Concept development (seeking feedback and partners)
- **Region:** Brazilian Amazon initially with potential to be replicated in other Pan-Amazon countries
- **Type of Instrument:** Investment Fund with a Philanthropic Facility
- **Type of investments:** Main instrument will be concessional loans to local associations, cooperatives and SMEs engaged in developing or expanding Wild Harvest Products value chains. Loans can be for working capital (e.g., payment on delivery of WHPs from local communities), or capital investments (e.g., boats, machinery)
- **Objectives:** (a) increase capital availability for on-the-ground projects; (b) enhance collaboration with corporates for leveraging offtake agreements; (c) provide enabling conditions for addressing repayment risks

About Amazon Investor Coalition

- The [Amazon Investor Coalition \(AIC\)](#) is a global impact finance learning-and-collaboration platform that unites investors, philanthropists, and corporate buyers in partnership with Amazon communities, entrepreneurs, governments, and civil society.
- AIC aims to shift Amazonian economies away from deforestation by promoting forest-friendly economic development across the Amazon region while fostering new economics for ecosystem regeneration, decarbonization, and conservation.
- Launched on September 16, 2020, at the United Nations 75 Global Governance Forum, AIC is a nonprofit operating in partnership with [NEXUS](#), [REWILD](#) and the [Giving Back Fund](#), with support from diverse partners including [Partnerships for Forests](#), [Latimpacto](#) and [ISPIS](#).
- With the mission of supporting systems of conservation finance that sustain people and forests across the Amazon, AIC serves as a catalyst by improving the capillarity between Amazonians and circles of capital around the world.

AIC is envisioned as the lead of the Philanthropic Facility within the Wild Harvest Fund and will facilitate the design of the instrument with an asset manager.

Ricardo Politi of Amazon Investor Coalition

Wild Harvest Fund: Instrument Mechanics

The Wild Harvest Fund is envisioned as a commercial and concessional capital blended vehicle, supplemented by a philanthropic facility which will fund technical assistance for investment readiness.

- 1** Commercial and concessional investors will fund the Investment Fund, where different tranches can be used to address different return and risk profiles. Alongside, donors will provide non-reimbursable grants to the Philanthropic Facility.
- 2** The Philanthropic Facility will provide grants for associations, cooperatives and small to medium enterprises (SMEs), as well as coordinate technical assistance and other support services that strengthen cooperatives / SMEs in the value chains.
- 3** The Investment Fund will provide loans for working and growth capital aligned with wild harvest product (WHP) value chain development.
- 4** These loans will enable the purchase and transformation of WHP at local levels, increasing the local economic benefits from WHPs.
- 5** SMEs, local cooperatives and associations will repay the loans.
- 6** The Investment Fund will pay the principal and returns to the investors.

Legal disclaimer: Since managing an investment fund is a regulated activity, a licensed fund manager will need to be appointed. The philanthropic facility, however, could potentially be managed by AIC and its partners. All legal aspects should be reviewed by an attorney in the relevant jurisdiction.

Investment Fund - Investors

A blended finance structure, where investors are willing to accept below-market returns, is crucial to improve financial viability and support the growth of the Wild Harvest Products sector

- Similar financial instruments have subordination starting at 36% of concessional capital to facilitate credit access to communities while making it possible for commercial investors to deploy capital into the structure
- Apart from having reduced returns, concessional capital can also reduce general risks by assuming a first-loss quota and providing long-term patient capital

Investment Fund – Main participants

An investment fund in Brazil involves a broad range of participants, either to comply with securities regulations or to meet specific investor requirements

Examples of organizations offering these services:

Asset Manager	Manages the fund's assets, including the intermediation of transactions, distribution of fund quotas and making investment decisions	  
Fund Administrator	Responsible for the administrative duties, assuring legal compliance of the fund and hiring services providers	  
Bookkeeping Agent	Responsible for opening and maintaining records in automatized systems regarding the fund's quota holder	  
Custodian	Responsible for the maintenance and registry of fund's documentation related to the public offer (underlying assets and regulation)	  
Fund Legal Advisor	Responsible for providing legal advisory regarding the fund documentation, issuing a legal opinion on the compliance and provide the legal due diligence	   
Collection Agent	Responsible for collecting the credit due but not paid from the fund's investees	  

Investment Fund – Initial terms & conditions

The investment terms and conditions (T&Cs) need to be developed when the fund approaches implementation phase. A financial model will need to be developed, and once completed, it will be essential to align with participants on how to structure the fund and distribute its quotas in compliance with applicable regulations.

Vehicle	Investment fund for debt, but securitizations can also be considered if easier to implement based on debentures or other similar financial instruments
Financial Responsibility	A fund manager or financial institution will be hired in Brazil to implement this structure
Currency	BRL. The financial model should include hedging costs or foreign exchange risk for investors
IRR	To be determined based on financial modeling. Similar structures offer 3-5% in USD, but commercial investors would expect higher returns
Term	To be determined following financial modeling, similar structures have terms of 5-10 years
Target Size	To be determined following financial modeling. Similar structures work with USD 3-25 million depending on the pipeline size
Risk Mitigation	Offtake agreements assigned and technical assistance

Investment Fund - Alternative financial structures

The Wild Harvest Fund was conceptualized to be a debt investment fund, but other structures can also be considered to raise capital from investors driving the WHF thesis. Several investment structures specific to Brazil could be used to raise funds (e.g., FIAGRO or CRA) or provide loans to cooperatives (e.g., debentures).

Structures	Description
FIAGRO (Agribusiness Value Chains Investment Fund)	- Investment fund specifically designed to promote capital inflows into Brazil's agricultural sector - Allows both individuals and institutional investors to invest in agricultural-related assets - FIAGRO can invest in real estate, fixed income and equity, or a combination of these - Allows investors to gain exposure to the agricultural sector while benefiting from the professional management of assets, potential tax benefits, and diversification
CRA (Agribusiness Receivables Certificate)	- Financial security backed by receivables from agricultural-related activities - CRA operates as a structured credit instrument, allowing enterprises in the agribusiness sector to raise funds by selling their future receivables to investors and converting future cash flows into immediate capital - A securitization company pools these receivables and issues the CRA, which is then sold to investors. The returns to investors come from the payments made by the underlying debtors - For individual investors, income from CRA investments is exempt from income tax, making them attractive for long-term investors
Debentures	- Debt securities issued by companies that can be used in the agricultural sector to raise funds for long-term projects or working capital - Similar to corporate bonds and attractive for companies seeking non-bank financing - Companies issue debentures offering a fixed or variable interest rate to investors - Debentures allow private placement making the structure cost-efficient

Investment Fund – Use of proceeds

Borrowers require timely disbursements to acquire Wild Harvest Products right after collection and to create / maintain the infrastructure for an efficient operation

Geography	Brazilian Amazon
Ticket Size	\$50-150k
Grace Period	To be defined after partner consultation and financial modeling
Concentration	To be defined based on regulatory and investors requirements
Number of deals	To be defined based final size and pipeline. To allocate \$5 - \$10 million in 5 to 10 years, the fund will have to place between 10 and 15 deals per year, some of which could be to the same cooperatives / SMEs over time

- 1 **Operational expenditure (opex) loans (up to 2 years)** focus on providing pre-financing to local cooperatives and businesses to facilitate the collection of Wild Harvest Products
- 2 **Capital expenditure (capex) loans (up to 5 years)** focus on financing the required equipment, infrastructure, or other long-term needs for the efficient and sustainable commercialization of Wild Harvest Products

Philanthropic Facility: Overview

The philanthropic facility provides catalytic non-reimbursable **funding to create the enabling conditions** for local cooperatives and SMEs **to receive loans from the investment fund**.

Key roles:

1. Fundraise and operate the philanthropic facility
2. Provide fast and flexible grants (\$5k - \$30k) to associations, cooperatives and SMEs that unlock barriers to access the investment fund
3. Engage key actors and support market development to support potential borrowers (R&D, connections with offtakers, traceability, monitoring)
4. Coordinate with local technical assistance providers to develop and strengthen the pipeline

Philanthropic Facility – Key roles (detail)

1. Fundraise and operate the philanthropic facility

- Since its inception in 2020, Amazon Investor Coalition has mobilized over \$50 million in new investment to the region. Within the Wild Harvest Fund structure, AIC is envisioned as a catalytic player organizing the Philanthropic Facility to support the Amazon bioeconomy. By leveraging its network, AIC mobilizes capital that unlocks grants and support for WHP value chains.
- As the model grows, the Philanthropic Facility could explore various alternative sources of funds such as Pará's jurisdictional REDD+ program, government funding, and (grant-based) resources from offtakers seeking stronger value chains, among others.

2. Provide fast and flexible grants (\$5k - \$30k) to cooperatives and SMEs that unlock barriers to:

- Access loans from the investment funds. Flexible grants could support a range of activities, from funding needed to finalize administrative processes or purchase equipment to hiring staff needed for certain administrative tasks, among others.
- Enter into purchase agreements that would increase the value of WHPs and increase the cooperative's loan repayment capacity.

Philanthropic Facility – Key roles (detail)

3. Coordinate key actors and support market development to support potential borrowers:

- Publish data on WHP markets to promote informed investment strategies through the WHF.
- Generate connections with offtakers, both through one-on-one connections and presenting WHPs in global spaces to increase the demand.
- Engage and finance strategic research organizations to showcase the nutritional content / value of WHPs, seeking to inform offtakers of the virtues of WHPs.
- Engage traceability providers and monitoring actors to build an impact story to increase demand for WHPs
- Engage technology innovators to reduce transaction costs and ease logistics and harvesting

Philanthropic Facility – Key roles (detail)

4. Coordinate with local technical assistance (TA) providers to develop and strengthen the pipeline

To reach the required on-the-ground capillarity, the Wild Harvest Fund will partner with organizations working with WHPs in the Amazon. At least **10 NGOs have been providing technical assistance** to cooperatives and SMEs, including governance, legal, financial, procurement, quality controls, and administrative excellence in the Brazilian Amazon. The processes engaging local communities will go through a free, prior and informed consent (FPIC) process and apply the relevant social and environmental safeguards.

These **TA providers will be engaged/recruited/hired as WHF pipeline developers** to:

- Keep trusted relationships with borrowers
- Conduct on-the-ground financial assessments and support business plan creation for proper WHP commercialization and capacity building
- Approach the WHF presenting the finance case for the cooperative or SME, detailing both the grants needed to reach investment readiness and the loan requirements.

Potential pipeline developers:

Why focus on cooperatives/ SMEs?

Cooperatives and small to medium enterprise (SMEs) are local actors that aggregate and transform products from community associations to deliver them in the quantity and quality required by manufacturers / large companies. Financing cooperatives directly leads to higher revenue and capacities at local communities while keeping transaction costs low.

Key actors to drive the expansion of WHPs

Cooperatives / SMEs in the Brazilian Amazon

A 2018 study found **over 250 associations and cooperatives commercializing forest products** in the Brazilian Amazon ([Desafio Conexsus](#)). At that time, 80% of those organizations commercialized less than BRL 600,000, but at least 30 cooperatives commercialized more than this.

It is expected that the number of cooperatives has grown, as well as their revenue and capacities.

Cooperatives

SMEs

- PNAE** | Programa Nacional de Alimentação Escolar

- 

WHF addressing interconnected barriers

Since there are several barriers to unlock the WHP market, the WHF will have a coordinated approach to tackling the following:

Connectivity to markets

- Investment Fund can provide loans to build required infrastructure

Financial access

- Blended finance vehicle dedicated to local organizations

Supply of WHPs

- Pipeline developers have been working with IPLC and local cooperatives to strengthen and formalize them

Demand of WHPs

- Philanthropic Facility will support interactions between IPLCs and companies

A low-angle, upward-looking photograph of a person climbing a thick palm tree trunk. The person is silhouetted against a twilight sky, wearing a dark long-sleeved shirt and pants, and using a rope and pulley system to ascend. The palm fronds are visible at the top of the frame, and the overall scene is dimly lit, suggesting dusk or dawn.

Implementation

Photo: Harvesting aguaje in Pacaya Samiria
National Reserve, Peru
© Musuk Nolte for Conservation International

Piloting the WHF

To start validating the WHF operational structure, AIC started doing a pilot transaction in October 2024 with the Cumarú value chain, with purchase agreements from Lush

- [The Giving Back Fund](#), which is part of the AIC network, will provide a grant of USD 65,000 for the project
- The funds will be channeled to Impact Bank through the Weight Institute, which specializes in managing philanthropic capital.
- The grant will support local communities identified by Origens Brasil in the state of Rondônia and the Xingu region - likely a Caiapó indigenous community involved in Cumarú (tonka bean) production.
- These communities have a sales agreement with Lush's exporter. Through the structure, Impact Bank will advance the payments to the communities in exchange for the assignment of receivables from Lush's exporter.
- The funds will revolve within the structure until fully utilized.

Example of potential WHF role in the andiroba value chain at Santarem (Pará)

Funding from the WHF could support Coomflona to purchase andiroba seeds from communities, paying them at the community and upon delivery of the product.

Example of potential WHF role in the copaiba value chain at Calha Norte (Pará)

Funding from the WHF could help formalize the market for WHP and support Coopaflora to provide the required equipment (e.g., collection bins) to communities, train them in sustainable collection, and purchase Copaiba oil from communities, paying them upon delivery of the product.

Comparable instruments & potential to partner

Note: Based on our assessment of comparable mechanisms, the most actionable path forward would be to partner with an existing initiative like Amazon Food & Forest or CRA Conexsus and add a specific component on Wild Harvest Products. Under such a collaboration, AIC's role could be to run the philanthropic facility focused on WHP.

Instrument	Region	Description	WHF differentiation
Amazonia Impact Fund I (Amazonia Impact Ventures)	Peru, Ecuador, Colombia	Through impact-linked debt financing and technical assistance, this fund will support indigenous and Amazon-based organizations. The loans have sustainability targets that incentivize biodiversity conservation and forest restoration as well as improving livelihoods.	Similar approach but WHF is focused exclusively in the Brazilian Amazon
Multi-biome Fund (fama.re.capital/Grupo Gaia)	Brazil, Multiple Biomes	Invest in financial assets related to socio-bioeconomy (invested in CRA Conexsus/Belterra, CRA Tabôa, CPR Amazonbai)	Different approach. WHF will be providing loans directly to the local businesses rather than investing in an existing pipeline
Agri3 Fund (UNEP, Rabobank and others)	Global	Blended finance fund offering credit enhancement/guarantees for financial intermediaries to finance sustainable agriculture and forest conservation	WHF focus is not to provide a guarantee but to provide working and growth capital directly to local businesses operating with the WHP value chains
Living Amazon Mechanism (Natura)* * More details on next slide	Brazil, Amazon	Debt bond mechanism that leverages offtake agreements for forest-compatible products to provide upfront finance, technical assistance, and structural community resources that catalyze sustainable bioeconomy.	WHF will provide working and growth capital directly to local businesses operating with the WHP beyond the Natura value chains
CRA Conexsus	Brazil, Amazon	A debt instrument designed to provide credit to local cooperatives and association of IPLCs related to sustainable production systems that keep forests standing.	Very similar – important to verify potential synergies
Amazon Food&Forest initiative	Brazil, Amazon	Very similar to the above instrument, but using a different approach based on private debentures and fintech structure	Very similar – important to verify potential synergies

Case study: Living Amazon Mechanism (Natura)

The Living Amazon Mechanism, proposed by Brazilian cosmetics company Natura&Co, is a blended finance instrument designed to strengthen socio-biodiversity supply chains and support IPLCs in the Amazon, from which Natura sources its raw materials.

- **Objective:** financial structure created to address the lack of financial and technical support for Natura's suppliers, which include cooperatives and associations of IPLCs
- **Products:** these suppliers provide NTFPs, which is a definition very aligned with the WHPs described in this blueprint
- **Instrument focus:** focuses on offering working capital and technical assistance directly to IPLC cooperatives and associations. As a result, the initial version, launched in 2023, was relatively small, totaling USD 2.5 million.
- **Differentiation with WHF:** The Wild Harvest Fund differs from Natura's structure in that it focuses on leveraging offtake agreements from multiple different companies.

Next steps

1. **Conduct an analysis of existing players offering similar financial instruments** to identify potential synergies that could enhance the development of the Wild Harvest Fund concept while avoiding overlaps and reducing transaction costs. Join forces with:
 - (a) An asset manager that has already launched an investment vehicle with similar thesis; and
 - (b) Technical assistance providers / pipeline developers who will bring the pipeline of associations, cooperatives and SMEs seeking financing
2. **Refine and build core competencies**, ensuring a clear distribution of roles and responsibilities between the asset manager and the philanthropic facility manager, as well as with other actors providing services to the Wild Harvest Fund such as WHP traceability, donor and investor reporting, technical assistance, pipeline assessment, network connections, technological support, and research and development, among others
3. **Develop and validate the financial model** based on the engagement with key actors, pipeline developers and other services providers to calibrate commercial, concessional, and philanthropic capital needs
4. **Partner with an asset manager** and their already constituted or to be constituted investment vehicle
5. **Develop social and environmental safeguards** for the WHF, ensuring that the investments in cooperatives and SMEs do not lead to unintended consequences with IPLCs
6. **Fundraise for the Philanthropic Facility** that will serve as a side car to the investment vehicle

Impact

Photo: Wild harvester in Acre, Brazil
© Flavio Forner

Scale Potential

There is significant potential to scale up sustainable sourcing of Wild Harvested Products within IPLCs lands

- The Quilombola communities and some others highlighted within the black square on the map, contain over **169 million tons** of Irrecoverable Carbon.
- The Wild Harvest Fund could expand to further Indigenous lands and Local Communities across the Brazilian Amazon.
- IPLC lands hold over **12.87 billion tons** of Irrecoverable Carbon – roughly 66% of all the Irrecoverable Carbon in Brazil.

Map: IPLC lands in the Brazilian Amazon, overlaid with their irrecoverable carbon content. Sources: Irrecoverable carbon data is from [Noon et al. 2021](#). Geospatial information on Indigenous lands in Brazil is from FUNAI: [Indigenous Lands: Geospatial Data and Maps — National Foundation of Indigenous Peoples](#)

Wild harvest products market size

Having a precise estimate of the market size for WHPs in the Brazilian Amazon is challenging given its informality, remoteness, and lack of precise definition of what is wild harvested. However, recent estimates indicate it could be from **US\$298 million to US\$ 5 billion** annually.

Nobre, C.A., 2023 estimates that:

- **R\$25,6 billion (~US\$5 billion)** is the annual market size for 13 key native products from the Brazilian Amazon (including açai fruit and palm, cocoa, Brazil nuts, babassu coconut and oil, cupuaçu, honey, rubber, buriti, annatto, copaíba, and andiroba)
- **By 2050**, those 13 key native products could have a market of **R\$ 38,5 billion (~US\$ 7.5 billion)** and produce 947,000 jobs.

Coslovsky, S., 2021 estimates that:

- Globally, the export market for 64 non-timber forest products (honey, fish, fruits, shrimp, nuts, oils) is **US\$176.6 billion per year**. However, the exports from the Brazilian Amazon represent just 0.17% of this market, with **US\$298 million**.

Theory of Change

Impact Indicators

Impact	Relevance	Relationship to Sustainable Development Goals (SDGs) and Convention on Biological Diversity (CBD) targets	Potential Indicators	How will it be measured?
Forest Area Supported	Forest Maintenance and Biodiversity	SDG 13: Climate Action (13.2) SDG 15: Life on Land (15.1) CBD: Target 3	• % of standing forest within the area where communities are wild harvesting • Number of hectares with standing forest in areas (indirectly) benefiting from the WHF • % of wild products harvested with sustainable practices • # of products commercialized per community	Satellite imagery using traceability information from cooperatives
Wild Harvest Products Value Chain benefits	Socio-economic	SDG 10: Reduced Inequalities SDG 1: No Poverty SDG 8 : Decent Work and Economic Growth	• # of cooperatives benefiting from the Wild Harvest Fund (directly) • Revenue increase for cooperatives benefiting from the Wild Harvest Fund (directly) • # of communities benefiting from the Wild Harvest Fund (indirectly) • # of households receiving income from wild harvesting • Community revenue from wild harvesting	Investment Fund administrative data Monitoring & evaluation (M&E) data collected by TA providers / WHF pipeline developers from cooperatives (WHP purchase records)
	Commercial	SDG 8 : Decent Work and Economic Growth SDG 12: Responsible Consumption and Production	• % of wild products delivered with the expected quality and time • Volume of wild products extracted (kg)	M&E data collected by TA providers / WHF pipeline developers from cooperatives (WHP purchase records)
